

John Anderson

Dear Hiring Team,

I am writing to apply for the Management Consulting Analyst graduate position at Accenture Strategy & Consulting. With a background in software engineering and early experience as a Java developer, I am highly motivated by the opportunity to work at the intersection of technology and business and to help clients turn technical possibilities into practical improvements.

Through my development experience, I have contributed to coding, maintenance, troubleshooting, and testing activities, while also gaining exposure to release processes and collaborative problem-solving. Working in technical environments has taught me how important it is to understand both the underlying system logic and the broader business purpose behind a solution. I enjoy breaking down problems, learning quickly, and contributing in structured team settings where progress depends on both technical understanding and clear communication.

What attracts me to Accenture is the chance to build on my technical foundation while developing a broader consulting toolkit. I am particularly interested in projects that involve implementation, process improvement, and technology-enabled change. For that reason, I would especially welcome consideration for Supply Chain & Operations, though I would also be excited to contribute more broadly across consulting teams where analytical thinking, adaptability, and client focus are important.

I would be proud to begin my consulting career at Accenture and contribute with energy, curiosity, and a strong willingness to grow. Thank you for your time and consideration.

Yours sincerely,

John Anderson
