Accenture Strategy & Consulting

Dear Hiring Team,

I am applying for the Strategy Analyst Graduate Position because I am motivated by solving complex problems in ways that combine quantitative depth with business relevance. My experience has shown me that analysis becomes most valuable when it helps organizations make better strategic choices, and this is exactly what attracts me to Accenture Strategy. I am particularly drawn to the possibility of working on questions where data, technology, and strategic priorities intersect.

In my current role at Norlys, I work with forecasting and customer analytics, while in my internship at Energinet I supported scenario-based analysis for planning and decision support. These experiences have strengthened both my technical skill set and my awareness that strong analysis alone is not enough. Real value comes from being able to explain assumptions, limitations, and implications clearly to stakeholders with different backgrounds. That is a part of the work I genuinely enjoy.

My academic profile in mathematical modelling and software/data engineering has given me a strong quantitative foundation, including optimization, simulation, and applied machine learning. At the same time, Aalborg University's project-based approach has taught me how to work collaboratively, structure open-ended problems, and translate technical work into practical recommendations. I believe this mix is highly relevant in a consulting setting where analytical rigor and communication must go hand in hand.

If possible, I would be especially interested in being considered for Data & AI, where I believe my profile would be particularly relevant. I would be excited by the opportunity to contribute to Accenture's strategy work while continuing to develop into a consultant who can bridge technical analysis and strategic decision-making.

Kind regards,

Mathias Wulff
