Accenture Strategy & Consulting

Dear Hiring Team,

I am applying for the Strategy Analyst Graduate Position because I am highly motivated by the opportunity to work at the intersection of strategy, technology, and data-driven decision-making. Over time, I have become especially interested in how AI, analytics, and automation can create business value, not just as technical capabilities, but as part of broader strategic choices. This is why the role at Accenture Strategy stands out to me: it combines analytical rigor, client collaboration, and a strong focus on future-facing business transformation.

In my current role at Novo Nordisk, I support decision-making through analytical models and dashboards, but a large part of the value comes from translating the output into something operational stakeholders can actually use. In my previous internship at Dawn Health, I worked more directly with AI-related use cases and learned how important it is to evaluate technical feasibility, user relevance, and business impact together. Across both settings, I have enjoyed the challenge of bridging technical detail and practical decision support.

My academic background combines computer science and business analytics, which has given me both technical depth and a strong quantitative mindset. At the same time, I have actively sought opportunities to communicate across different stakeholder groups, whether through teaching, presentations, or cross-functional project work. I believe that this combination is relevant in strategy consulting, where strong analysis only becomes valuable when it is connected to client context and clear action.

If possible, I would be particularly interested in being considered for Data & AI and Technology Strategy & Advisory. These areas align closely with both my experience and my curiosity, and I would be excited by the opportunity to contribute to projects where technology choices shape broader business strategy.

Kind regards,

Emil Rosenkilde
