Accenture

Dear Hiring Team,

I am applying for the Applied Technical Specialist role because I am motivated by hands-on technical work where quantitative methods and engineering judgment are used to solve real problems.

At DTU Compute, I currently work as a research assistant within applied AI, where I develop and evaluate machine learning models, run experiments, and improve analytical robustness. Before that, at Energinet, I used optimization and simulation techniques in forecasting and planning-related tasks, and at AAU Robotics Lab I contributed to algorithmic improvements in prototype tooling. These experiences have given me a strong technical foundation in modelling, statistical analysis, and solution development.

My academic background in Computer Science and Engineering and Applied Mathematics has deepened my interest in machine learning, optimization, and technical systems. I would be excited to contribute with both analytical rigor and practical implementation skills in a technical consulting environment.

I would welcome the opportunity to contribute with a Danish market perspective, strong communication skills in English, and a structured, collaborative approach.

Kind regards,

Nikolaj Damsgaard
