

Julien Mourey

Dear Hiring Team,

I am pleased to apply for the Management Consulting Analyst graduate position at Accenture Strategy & Consulting. With an engineering background and professional experience spanning mechanical engineering, equipment optimization, inspections, and process improvement, I am motivated by the opportunity to apply my analytical and operational perspective in a consulting environment focused on solving complex client challenges.

Across my roles, I have worked with workflows, process efficiency, field inspections, documentation, and coordination across technical stakeholders. This has given me a practical understanding of how operational performance can be improved through structured analysis, sound communication, and disciplined follow-through. I am particularly drawn to work where technical knowledge must be translated into business value, whether through more efficient processes, better decision support, or stronger implementation of change initiatives.

Accenture's combination of strategic thinking and hands-on implementation is especially appealing to me. Given my experience and academic profile, I would be particularly interested in being considered for Resources, where engineering-heavy environments and operational complexity are often central, though I would also be keen to contribute in adjacent areas involving transformation and performance improvement.

I would welcome the opportunity to start my consulting career at Accenture and contribute with a strong work ethic, curiosity, and a structured approach to problem-solving. Thank you for considering my application.

Yours sincerely,

Julien Mourey
