Accenture Strategy & Consulting

Dear Hiring Team,

I am applying for the Strategy Analyst Graduate Position because I am motivated by strategic work in areas where industry dynamics, technology development, and long-term investment choices are tightly connected. Through my studies and work experience, I have become especially interested in transformation within energy and industry, and I am excited by the possibility of contributing to strategy projects that address both competitive and societal challenges.

In my current role at Topsoe, I support analyses related to industrial transition and technology pathways, and in my internship at Ørsted I worked with technical-commercial assessments in an energy context. These experiences have taught me how important it is to combine analytical depth with a broader understanding of market conditions, stakeholder priorities, and implementation realities. They have also made me more curious about the role strategy consulting can play in helping organizations navigate complex transitions under uncertainty.

My academic background in engineering has given me strong quantitative skills and comfort working with modelling, optimization, and scenario analysis. At the same time, I have increasingly sought assignments where the purpose is not just technical problem solving in isolation, but better business and strategic decision-making. I find it energizing to connect technical substance with broader organizational questions and to help structure decisions in areas with many interdependencies.

If possible, I would be particularly interested in being considered for Industry Strategy and Data & AI. These practice areas match both my sector interest and my analytical profile, and I would welcome the opportunity to contribute to strategy work where technical insight can support sustainable and competitive transformation.

Kind regards,

Nikolaj Bjerre
