21 April 2026

Dear Hiring Team,

I am applying for a graduate role where technical depth, quantitative analysis, and solution development are central to the work. I am particularly motivated by opportunities to apply machine learning, modelling, and optimization methods to real problems where analytical quality and implementation discipline matter.

My academic background has given me a strong technical foundation in computer science, applied mathematics, and statistical methods. In both research and industry-oriented roles, I have worked hands-on with model development, validation, simulation, and technical documentation. I enjoy understanding a problem deeply, testing alternative approaches, and building solutions that are robust rather than merely promising on paper.

What motivates me most is the combination of analytical complexity and practical application. Whether the challenge relates to forecasting, optimization, or technical decision support, I am energized by rigorous problem solving and by collaborating with domain experts to ensure that models reflect real operational conditions.

I would bring strong technical curiosity, disciplined execution, and a solid ability to translate quantitative work into structured outputs that others can build on. I would value the opportunity to contribute in a team where advanced methods are used to create meaningful and scalable solutions.

Kind regards,

Nikolaj Bjerre

Applying for: Graduate role in data science, engineering, or advanced analytics
