COVER LETTER MANAGEMENT SOLUTIONS (LONDON)

DANICA NILSSON HENNELLY

Dear Hiring Team,

I am applying for the New Technologies and Digital Transformation Consultant position in London. Currently pursuing a Master's degree in IT, Communication and Organization, I combine hands-on experience working with digital solutions in a leading SaaS gamification platform with experience developing LLM-based prototypes. I am motivated to contribute to new technology and digital transformation projects by applying both my practical and academic experience.

In my current role as a Customer Success Engineer Associate at Playable, I work closely with clients to implement and optimise digital solutions. Moreover, I also lead technical training projects for both Danish and international clients. My role has strengthened my ability to structure and solve problems, translate technical functionality into business value, and collaborate effectively in multidisciplinary teams.

Alongside my professional experience, my academic work during my Master's degree has focused on digital transformation, AI, and system development. I have developed an LLM-based prototype in collaboration with Hummel and, in my Master's thesis with Accenture, I am currently building a Python-based solution using OpenAI's structured outputs (via Pydantic) to extract, classify, and structure unstructured data to support more efficient internal processes. These projects have strengthened my ability to design data pipelines, manage unstructured data, and translate model outputs into actionable insight.

I am particularly drawn to Management Solutions' focus on IT strategy and the implementation of specialist technologies in projects. The opportunity to contribute to IT strategy and governance aligns closely with my academic background and professional experience working with digital systems.

I bring a strong academic foundation, technical understanding, and a structured approach to problem solving. I am comfortable working in multidisciplinary teams and adapting quickly to new challenges, and I am motivated by delivering high-quality solutions in client-facing environments. With experience working with Danish and international clients, I am confident in contributing effectively in an international consulting setting.

I would welcome the opportunity to further discuss how my background and motivation align with Management Solutions.

Yours sincerely,

Danica Nilsson Hennelly
