Accenture

Dear Hiring Team,

I am applying for the Technology Strategy & Advisory Analyst role because I am motivated by work at the intersection of business priorities, digital transformation, and technology strategy.

In my current role at Accenture Song, I support strategy work for digital transformation initiatives and help build practical business cases for automation and process redesign. Earlier, at Arla Foods, I contributed to transformation workshops and operating model analysis. Across both experiences, I have enjoyed synthesizing complex information, creating clarity for stakeholders, and turning ideas into actionable plans.

Academically, my master's in Business Administration and Digital Business has given me a strong foundation in digital business, market analysis, and technology-enabled business models. Combined with my experience in executive materials and transformation projects, I believe I can contribute with both structured problem solving and an implementation-oriented mindset.

I would welcome the opportunity to contribute with a Danish market perspective, strong communication skills in English, and a structured, collaborative approach.

Kind regards,

Freja Mikkelsen
