**Accenture**

Dear Hiring Team,

I am applying for the Tech Translator / Data & AI Analyst role because I am motivated by helping organizations turn business needs into relevant data, AI, and technology solutions.

In my current student role at Topdanmark, I support AI enablement projects by framing business use cases, clarifying stakeholder needs, and helping connect those needs to data and technical capabilities. Earlier, at Netcompany, I worked with reporting use cases, requirements gathering, and data flow mapping. These experiences have strengthened my ability to translate between business and technical perspectives and to communicate clearly across teams.

My academic profile in Information Systems and Business Intelligence has given me a strong foundation in analytics interpretation, data literacy, and business-IT alignment. I would be excited to bring that combination of analytical depth and practical communication into a consulting environment.

I would welcome the opportunity to contribute with a Danish market perspective, strong communication skills in English, and a structured, collaborative approach.

Kind regards,

Jonas Wessel
