21 April 2026

Dear Hiring Team,

I am applying for an entry-level position within strategy and technology consulting because I am motivated by solving complex business challenges where technology is a key enabler of change. Throughout my studies and professional experience, I have developed a strong interest in digital transformation, technology-enabled business models, and the kind of structured problem solving required to support strategic decision-making.

In my current student role, I support projects that require translation of business priorities into technology strategy, operating model considerations, and clear recommendations for senior stakeholders. I enjoy building logic, identifying value levers, and structuring ambiguous problems into practical paths forward. This has strengthened my ability to contribute to business case development, executive communication, and transformation planning.

From previous roles in both consulting and industry, I have gained experience working across stakeholders with different priorities and levels of technical understanding. I thrive when I can connect commercial objectives with implementation realities and help define not only what should be done, but also how it can realistically be executed.

What I would bring is a strong analytical mindset, high attention to structure and quality, and genuine motivation to work with technology strategy in a client-facing environment. I am particularly drawn to teams where strategic problem solving, business development, and digital transformation are closely connected. I would value the opportunity to contribute and continue developing in such a setting.

Kind regards,

Andreas Holmgaard
