21 April 2026

Dear Hiring Team,

I am applying for an entry-level role because I am motivated by helping organizations understand how technology can be translated into practical business value. I am especially interested in positions where business-IT alignment, data literacy, and use-case development are central to identifying the right digital opportunities.

Across my studies and work experience, I have developed a strong interest in analytics, AI enablement, and systems understanding. In my current role, I work with stakeholders to clarify needs, translate them into structured requirements, and help define what success should look like from both a business and data perspective. I enjoy creating shared understanding between people with different perspectives and levels of technical knowledge.

In previous roles, I have supported requirement gathering, testing, and prototype work, which has strengthened my ability to move between analysis and execution. I am motivated by environments where I can bridge business needs and technical possibilities, and where clear translation is essential to good solution design.

I would bring strong curiosity, structure, and an ability to communicate technology in a way that supports decision-making and implementation. I would value the opportunity to contribute to a team working with data, AI, and digital transformation in a practical and client-oriented way.

Kind regards,

Emilie Norgaard

Applying for: Associate Consultant / Data, AI or Business Analysis team
