Accenture Strategy & Consulting

Re: Application – Management Consulting Analyst (Graduate, September 2026)

Copenhagen, 21 May 2026

Dear Hiring Manager,

I am writing to express my strong interest in the Management Consulting Analyst position at Accenture Strategy & Consulting, starting September 2026. As an MSc student in IT & Cognition at the University of Copenhagen, with practical experience applying data science and AI in industrial and commercial settings, I am drawn to Accenture's commitment to technology-driven business transformation – and to the opportunity to bring technical depth into client-facing consulting work.

My six months at Ørsted's Digital & Innovation team gave me a clear view of what it takes to turn advanced analytics into business impact. Building an anomaly detection system for offshore wind turbines required not just technical skill but a structured understanding of the operational workflows it was meant to improve, and the ability to present ambiguous findings to a room of engineers and executives simultaneously. That experience – of sitting at the intersection of data, operations, and strategy – is precisely the work I want to do more of at Accenture.

My academic research reinforces this applied orientation. My master's thesis investigates how explainability in AI systems affects trust and decision quality in B2B procurement – a question with immediate commercial relevance as organisations increasingly delegate high-stakes decisions to algorithmic tools. The research has required me to engage with both technical literature and organisational behaviour scholarship, and to communicate my findings to audiences spanning computer scientists, psychologists, and business professionals.

I am particularly interested in Accenture's Consumer Goods & Services and Resources practices, where the application of data and AI to supply chain optimisation, customer intelligence, and operational efficiency presents enormous opportunities. I would also be enthusiastic to contribute to the Talent & Organisation practice given my background in human-computer interaction and cognitive systems.

I would welcome the opportunity to meet the team in Copenhagen during the November bootcamp and to work through a case in person. I am fully committed to attending in person and am excited to demonstrate both my analytical and interpersonal capabilities.

Yours sincerely,

Jonas Vestergaard
